

## FCM - Fixed "Curb" Mounted Skylight (A21 Model)

### FCM Curb detail – suggestion only. (flashing is not supplied with the FCM)

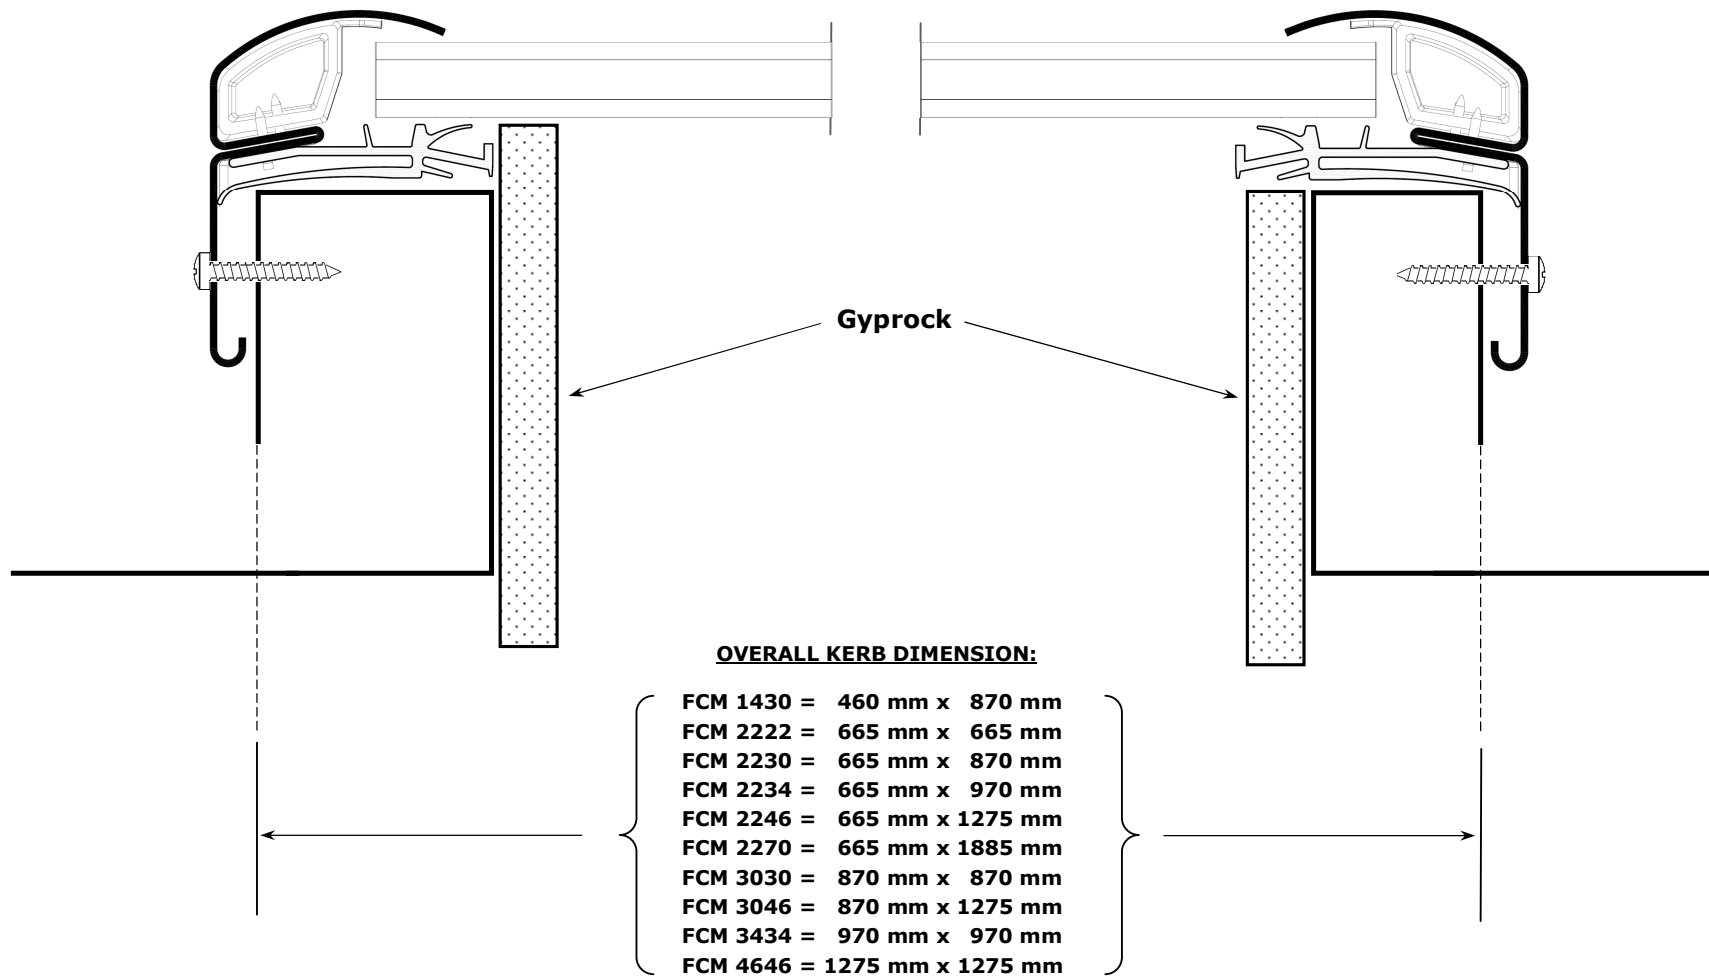

The diagram describes a suggested method of fixing the FCM on a curb flashing. As such it is intended to be **used as a guide only**. Any roof flashing and/or waterproofing is to be supplied by the installer/roofer.

This diagram does **not** apply to any internal and/or external guarantees issued.

**As the FCM has been designed as a typical "dome" replacement we do not provide the flashing for this product. A custom flashing has to be made by the roofer/installer.**

**The FCM is secured to the custom built flashing with screws (provided by VELUX). A set of installation instructions is also provided with the FCM.**

**If each curb is made to the maximum possible size (50mm wide) the installed gyprock will encroach on the glass area.**

**If the curb width is narrower than 40mm the gyprock can be secured in the gyprock rebate and will not encroach on the glass area.**

*Other FCM sizes available on request: (overall kerb dimensions)*

*FCM 1430 = 450 mm x 875 mm / FCM 2230 = 665 mm x 875 mm / FCM 3434 = 970 mm x 970 mm*
